

AI FAQ ASSISTANT API

8. Project Demonstration Phase

During the final demonstration, the project can be presented in the following order.

Step 1 – Introduce the Project

Explain:

- What the project does.
- Why it is needed.
- Who can use it.

Step 2 – Explain Architecture

Show:

Step 3 – Start the Backend

Run the backend application.

Example:

```
Server started successfully  
Running on localhost
```

Step 4 – Open Postman

Create:

POST /api/faq/ask

Enter:

```
{  
  "question": "How can I reset my password?"  
}
```

Step 5 – Send Request

Click **Send**.

Expected result:

```
{  
  "success": true,  
  "answer": "You can reset your password using the Forgot Password  
option."  
}
```

Step 6 – Demonstrate Error Handling

Send:

```
{  
  "question": ""  
}
```

Show:

```
{  
  "success": false,  
  "message": "Question cannot be empty."  
}
```

Step 7 - Demonstrate Multiple Questions

Try:

What are the working hours?

How can I contact support?

How do I reset my password?

Show that the API provides the appropriate responses.

Step 8 – Explain GitHub

Show:

- Source code
- README
- Documentation
- Database files/scripts
- Testing files
- Screenshots

Step 9 – Final Result

Conclude the demonstration by showing that the system:

Final Project Flow

Conclusion

The AI FAQ Assistant API is an intelligent and efficient system developed to automate the process of answering frequently asked questions. The system allows users to submit questions through an API and receive relevant answers quickly. By using AI/NLP techniques and a structured FAQ knowledge base, the application can understand user queries and provide suitable responses. The project helps reduce repetitive work for support staff, saves time, improves accessibility to information, and provides consistent responses to users. The API-based architecture also makes the system flexible and easy to integrate with websites, mobile applications, and other software systems. The project successfully demonstrates how Artificial Intelligence, APIs, backend development, and databases can be combined to create a practical FAQ automation system. In the future, the system can be enhanced with multilingual support, voice-based interaction, chat history, an admin dashboard, analytics, and more advanced AI capabilities.
